

# Test Plan

## 1. Introduction

Shady Meadows is a hotel booking management system that provides features for managing hotel reservations. The system allows users to create, view, update, and delete booking information. It also provides user authentication to support authorized operations.

## 2. Test Objectives

- Verify the hotel booking functionality
- Verify booking information accuracy
- Verify authentication functionality
- Verify booking data validation
- Verify system response and error handling
- Verify message contact request functionality

## 3. Test Scope

### 3.1 In Scope

- Authentication
- Booking management
- Contact request
- API request and response validation
- HTTP status code and error handling

### 3.2 Out of Scope

- UI/ Front – end Testing
- Security Testing
- Database Testing
- Performance Testing

## 4. Test Strategy

| Testing Type                        | Description                                                                                                                                      |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Authentication                      | Verify authentication and token generation.                                                                                                      |
| Booking Management                  | Verify booking functionalities, including create, retrieve, update, partial update, and delete operations.                                       |
| Contact Request                     | Verify contact request functionality.                                                                                                            |
| API request and response validation | Verify that API requests contain the expected parameters, headers, and request body, and that responses contain the expected data and structure. |
| HTTP status code and error handling | Verify that the API returns appropriate HTTP status codes and handles invalid or failed requests with appropriate error responses.               |

## 5. Test Environment

| Item             | Value                                                                                 |
|------------------|---------------------------------------------------------------------------------------|
| Application      | Shady Meadows                                                                         |
| URL              | <a href="https://automationintesting.online/">https://automationintesting.online/</a> |
| Testing Tool     | Postman                                                                               |
| Operating System | Windows 11                                                                            |
| Browser          | Google Chrome (Latest Version)                                                        |

|              |                    |
|--------------|--------------------|
| Device       | Desktop/Laptop     |
| Testing Type | Manual API Testing |

## 6. Entry Criteria

- Business Requirements and testing scope are defined and approved.
- API documentation and endpoint information are available.
- Test environment/API is accessible and available for testing.
- Required test data is available.
- Test cases are prepared and reviewed.
- Postman is configured and ready for API testing.

## 7. Exit Criteria

- All planned test cases have been executed.
- All critical and high-severity defects have been resolved or formally accepted.
- Failed test cases have been investigated and retested where applicable.
- Required regression testing has been completed.
- Test results and defects have been fully documented.
- Test Summary Report has been completed.
