

TEST SUMMARY REPORT

Shady Meadows Hotel Booking Website – MANUAL API TESTING

Project Name	Shady Meadows Hotel Booking Website Testing
Testing Type	Manual API Testing
Test Execution	5 Test Case
Test Status	Incompleted
Defects Found	0

1. Test Object

The objective of this testing was to verify key functionalities and checking the API of the Shady Meadows web application, including authentication, booking management, contact request, API request and response, HTTP status code and error handling.

2. Test Scope

Module	Test Coverage
Authentication	Verify authentication and token generation.
Booking Managemnet	Verify booking functionalities, including create, retrieve, update, partial update, and delete operations.
Contact Request	Verify contact request functionality.
API request and response validation	Verify that API requests contain the expected parameters, headers, and request body, and that responses contain the expected data and structure.
HTTP status code and error handling	Verify that the API returns appropriate HTTP status codes and handles invalid or failed requests with appropriate error responses.

3. Test Execution Summary

Metric	Result
Total Test Case	19
Executed	5
Passed	5

Failed	0
Blocked	0
Not Executed	14
Pass Rate	100%
Fail Rate	0%
Defects Found	0%

4. Test Case Status

Test Case ID	Status
TS_AUTH_001_TC01	Pass
TS_AUTH_004_TC02	Pass
TS_BM_002_TC03	Pass
TS_API_002_TC04	Pass
TS_HTTP_003_TC05	Pass

5. Defects Summary

Severity	Number of Defects
Critical	0
High	0
Medium	0
Low	0
Total	0

No defects were identified during the execution of the selected test cases.

6. Key Testing Results

All 5 test cases were executed successfully and passed.

- Authentication functionality was successfully verified, including username validation and logout functionality testing.
- Booking management functionality was successfully verified, including the creation of a new booking..
- API request and response validation were successfully verified, including the expected request headers.

- HTTP status codes and error handling were successfully verified for various scenarios, including invalid requests.

7. Conclusion

Based on the executed test cases, all tested functionalities met their expected results. No defects were identified during this test execution. The tested functionalities are considered Pass based on the current test scope and execution results.

8. Recommendation

Consider renaming the “**Reserve Now**” button to “**Next**” after selecting the check-in and check-out dates, as users are still required to enter guest information in the next step.
